### Project Overview

Project Name: Automated Network Request Management in ServiceNow

Project Description: Automating network request management in ServiceNow enhances operational efficiency by streamlining workflows, reducing manual interventions, and ensuring real-time updates. The project implements a fully automated and scalable network change management process to handle user-initiated network requests, ensuring rapid fulfillment, audit-ready change records, and accurate configuration tracking.

Project Version: 1.0

Testing Period: [Start Date] to [End Date]

### Testing Scope

- Network request submission through the Service Catalog
- Automated approval workflow (Flow Designer) based on request type and priority
- Auto-generation of audit-ready Change Records
- CMDB configuration item creation and updates
- Real-time status notifications to requestors and approvers
- Role-based access control across requestor, approver, and network admin roles
- Integration with network orchestration layer via REST APIs

### Testing Environment

URL / Location: [ServiceNow test instance URL]

Credentials (if required): [Username / Password – shared securely, not in this document]

## Test Cases

| Test Case ID | Test Scenario                                               | Test Steps                                                                                                   | Expected Result                                                 | Actual Result | Pass/Fail |
|--------------|-------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------|---------------|-----------|
| TC-001       | Requestor submits a new network request via Service Catalog | 1. Log in to Service Portal<br>2. Open 'Network Request' catalog item<br>3. Fill required details and submit | Request is created with unique number and routed to approval    |               |           |
| TC-002       | Approver reviews and approves a network request             | 1. Log in as Approver<br>2. Open pending approval<br>3. Approve with comments                                | Request status updates to Approved; Change Record is generated  |               |           |
| TC-003       | Network Change Record links correctly to CMDB CI            | 1. Open approved request<br>2. Verify linked Change Record<br>3. Check CMDB CI relationship                  | Change Record and CMDB CI are accurately linked and updated     |               |           |
| TC-004       | Requestor receives real-time status notifications           | 1. Track request from submission to closure<br>2. Monitor email/portal alerts                                | Notifications are received at every state transition            |               |           |
| TC-005       | Audit trail is complete and exportable                      | 1. Open a closed request<br>2. Review activity/audit log<br>3. Export log                                    | Audit trail shows all actions with timestamps and is exportable |               |           |
| TC-006       | Unauthorized user cannot approve requests                   | 1. Log in with requestor role<br>2. Attempt to access approval action                                        | System denies access; role-based restriction enforced           |               |           |

## Bug Tracking

| Bug ID | Bug Description                         | Steps to Reproduce                | Severity          | Status                    | Additional Feedback       |
|--------|-----------------------------------------|-----------------------------------|-------------------|---------------------------|---------------------------|
| BG-001 | [Describe the issue or bug encountered] | 1. [Step 1]2. [Step 2]3. [Step 3] | [Low/Medium/High] | [Open/In Progress/Closed] | [Any additional comments] |
| ...    | ...                                     | ...                               | ...               | ...                       | ...                       |

Notes

- Ensure that all test cases cover both positive and negative scenarios.
- Encourage testers to provide detailed feedback, including suggestions for improvement.
- Bug tracking should include severity, status, and clear steps to reproduce.
- Obtain sign-off from both the project manager and product owner before proceeding with deployment.
