

Project Design Phase-II

Solution Requirements (Functional & Non-functional)

Date	
Team ID	
Project Name	Automated Network Request Management in ServiceNow
Maximum Marks	4 Marks

Functional Requirements:

Following are the functional requirements of the proposed Automated Network Request Management solution in ServiceNow.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Request Submission	Self-service catalog item for network requests Guided request forms for firewall, VLAN, and VPN types Request submission via virtual agent / chatbot
FR-2	Approval Workflow	Multi-level automated approval routing (manager, security, network) Approve / reject with comments from e-mail or portal SLA-based automatic escalation
FR-3	Change Fulfilment	Auto-assignment of approved requests to the network team Pre-built change templates for common request types Automated rollback plan generation for high-risk changes
FR-4	Configuration Management	Automatic CMDB creation / update on change closure Configuration validation against existing CMDB records Version history tracking for configuration items
FR-5	Notifications & Tracking	Real-time status notifications to the requester Requester-facing status dashboard SLA breach alerts to approvers and administrators
FR-6	Audit & Reporting	Auto-generated, audit-ready change records Compliance reporting across date ranges Exportable change and configuration history

Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

FR No.	Non-Functional Requirement	Description
NFR-1	Usability	Intuitive, guided self-service catalog forms with minimal required fields; mobile-responsive Service Portal and Now Mobile support.
NFR-2	Security	Role-based access control, encryption of data in transit and at rest, and OAuth 2.0 for all external API integrations.
NFR-3	Reliability	Automatic failover for the approval and fulfilment workflow engine, with no loss of in-flight requests during instance maintenance.
NFR-4	Performance	Requests are validated and routed within 2 seconds; the status dashboard loads within 3 seconds under normal load.
NFR-5	Availability	Deployment on ServiceNow's highly available, multi-instance SaaS architecture, targeting 99.9% uptime.
NFR-6	Scalability	Workflow and catalog design supports growing request volumes and additional business units without performance degradation.
